Summary

AI Engineer with hands-on experience building agentic AI systems end to end in Python from data retrieval and orchestration to autonomous multi-step pipelines with human-in-the-loop safety controls. Strong foundation in software engineering (MERN, REST APIs, Git/GitHub, SQL) combined with practical LLM system design: tool calling, retrieval-augmented generation, structured output validation, and sandboxed code execution. Comfortable moving fast on unfamiliar codebases, debugging complex systems, and shipping working prototypes independently. Actively expanding into applied deep learning and computer vision fundamentals (PyTorch).

Experience

Zentosys Solutions Pvt Ltd

Software Developer Intern

Pune, Maharashtra (Remote)

07/2025 - Present

- Leveraged advanced LLMs (Cursor Pro, Claude, ChatGPT) to bypass boilerplate coding, accelerating feature delivery and debugging complex asynchronous logic across unfamiliar technical systems.
- Engineered key architectural modules for an enterprise Transport Management System (TMS) using the MERN stack, moving rapidly from initial design to working prototypes.
- Built a Flutter application from scratch integrating Firebase Realtime Database and REST APIs for near real-time location streaming and live data tracking.
- Built a reusable library of ReactJS components, optimizing frontend data flow and reducing development cycle times across parallel modules.

Insyble Tech Pvt Ltd

Web Developer Intern

Yamunanagar, Haryana

06/2025 - 08/2025

- Designed and deployed responsive MERN stack web applications, partnering with backend teams to integrate REST APIs and run validation cycles.
- Built interactive user interfaces using ReactJS, JavaScript, TailwindCSS, and HTML5/CSS3.

Projects

Bounty | Autonomous AI Agent for Resolving Open-Source GitHub Issues | [GitHub](#)

Tech Stack: Python, LangGraph, tree-sitter, Chroma (vector search), E2B (sandboxed execution), GitHub REST API, SQLite

- Built a multi-agent pipeline that triages open GitHub issues, locates relevant source files using AST-based code chunking (tree-sitter) combined with import-graph traversal, and plans code fixes before generating any code.
- Designed a validation system requiring every AI-generated test to fail on the unpatched code and pass only after the fix is applied — rejecting tests that don't genuinely verify the fix.
- Implemented a self-correction loop that feeds real sandbox execution errors back into the code-generation step, improving fix convergence across retries.
- Engineered a safety-first architecture: isolated cloud sandbox for untrusted code execution, per-user credential handling, and a mandatory human-approval gate before any pull request is submitted.

NewsifyX.ai | AI-Powered News Automation Platform | [Live](#) | [GitHub](#)

Tech Stack: MongoDB, ExpressJS, ReactJS, NodeJS, Groq API, X (Twitter) API

- Engineered an autonomous web application orchestrating Groq LLM APIs to perform semantic filtering, fact-verification, and multi-stage agentic workflows without human intervention.
- Integrated external APIs into a fully hands-off publishing pipeline using scheduled cron jobs and custom logic to evaluate content readiness before delivery.
- Designed a ReactJS admin dashboard to monitor LLM token consumption, automated queue status, and system logs in real time.

AI Voice Portfolio Website | [Live](#) | [GitHub](#)

Tech Stack: ReactJS, TailwindCSS, OpenAI APIs, VAPI

- Built a responsive personal portfolio featuring a low-latency, voice-driven AI assistant simulating a real-time technical interview.
- Integrated VAPI with OpenAI Whisper (STT) and GPT models for fluid speech-to-text with sub-second response latency.
- Implemented dynamic system prompting, tool calling, and RAG-based contextual retrieval grounded in a structured personal knowledge base to eliminate hallucinations.

Skills

- **AI & Agentic Engineering:** Agent Orchestration, Tool Calling, RAG, Structured Output Validation, Prompt Engineering, Model Evaluation, Sandboxed Code Execution.
 - **Programming Languages:** Python, JavaScript, C++, C, HTML5, CSS3.
 - **Frameworks & Technologies:** ReactJS, NodeJS, ExpressJS, Flutter, TailwindCSS.
 - **Databases & Cloud:** MongoDB, PostgreSQL, SQLite, Firebase (Realtime DB / Firestore), Supabase.
 - **Tools & Platforms:** Git, GitHub, Docker, REST APIs, Postman, Cursor Pro, Claude Pro, ChatGPT, VAPI, OpenAI Whisper.
 - **Currently learning:** PyTorch, deep learning fundamentals, computer vision basics.
-

Achievements & Hackathons

- **Semi-Finalist, Flipkart GRiD 7.0:** Ranked among the top competitors nationwide in Flipkart's flagship software engineering challenge.
 - **Algorithmic Proficiency:** Solved 300+ Data Structures and Algorithms (DSA) problems on LeetCode.
 - **Hackathon Competitor:** Delivered a real-time public transport navigation system for the Smart India Hackathon (SIH) under strict time constraints.
-

Education

Seth Jai Prakash Mukand Lal Institute of Engineering & Technology, Radaur (2023 - Present)
Bachelor of Technology (Computer Science Engineering) | CGPA: 8.5/10

DAV Cent Public School, Radaur (2022 - 2023)
12th - Non-Medical (Physics, Chemistry, Maths, English) | Percentage: 94.4%
